COMPREHENSIVE SCHOOL SAFETY ASSESSMENT SUITE
COMPREHENSIVE SCHOOL SAFETY APPLICATION (CSS APP)

Mobile digitial toolset developed for schools and divisions to monitor the presence and implementation of School Safety Initiatives based on the different pillars

- linked with DepEd's Basic Education Information System (BEIS) using an API. This integration allows schools to access reports on school safety based on the CSS Framework's pillars and the local hazard assessments from Hazard Hunter.
- Initial testing with the old BEIS data set was successful, but updates to BEIS have impacted tool testing and usage.
- Schools use the BEIS to input their annual data. The CSS application process the data and consolidate and prepare analytics accessible to schools, sub-national and national levels
- CSS data will serve as reference for school improvement and DRRM plans
