

# Comprehensive School Safety Assessment Suite

## School Safety Self-Assessment Survey

Mobile digital toolset and methodology that allow School Management Committees to undertake a multi-hazard risk assessment for monitoring and encouraging progress towards Comprehensive School Safety (CSS).

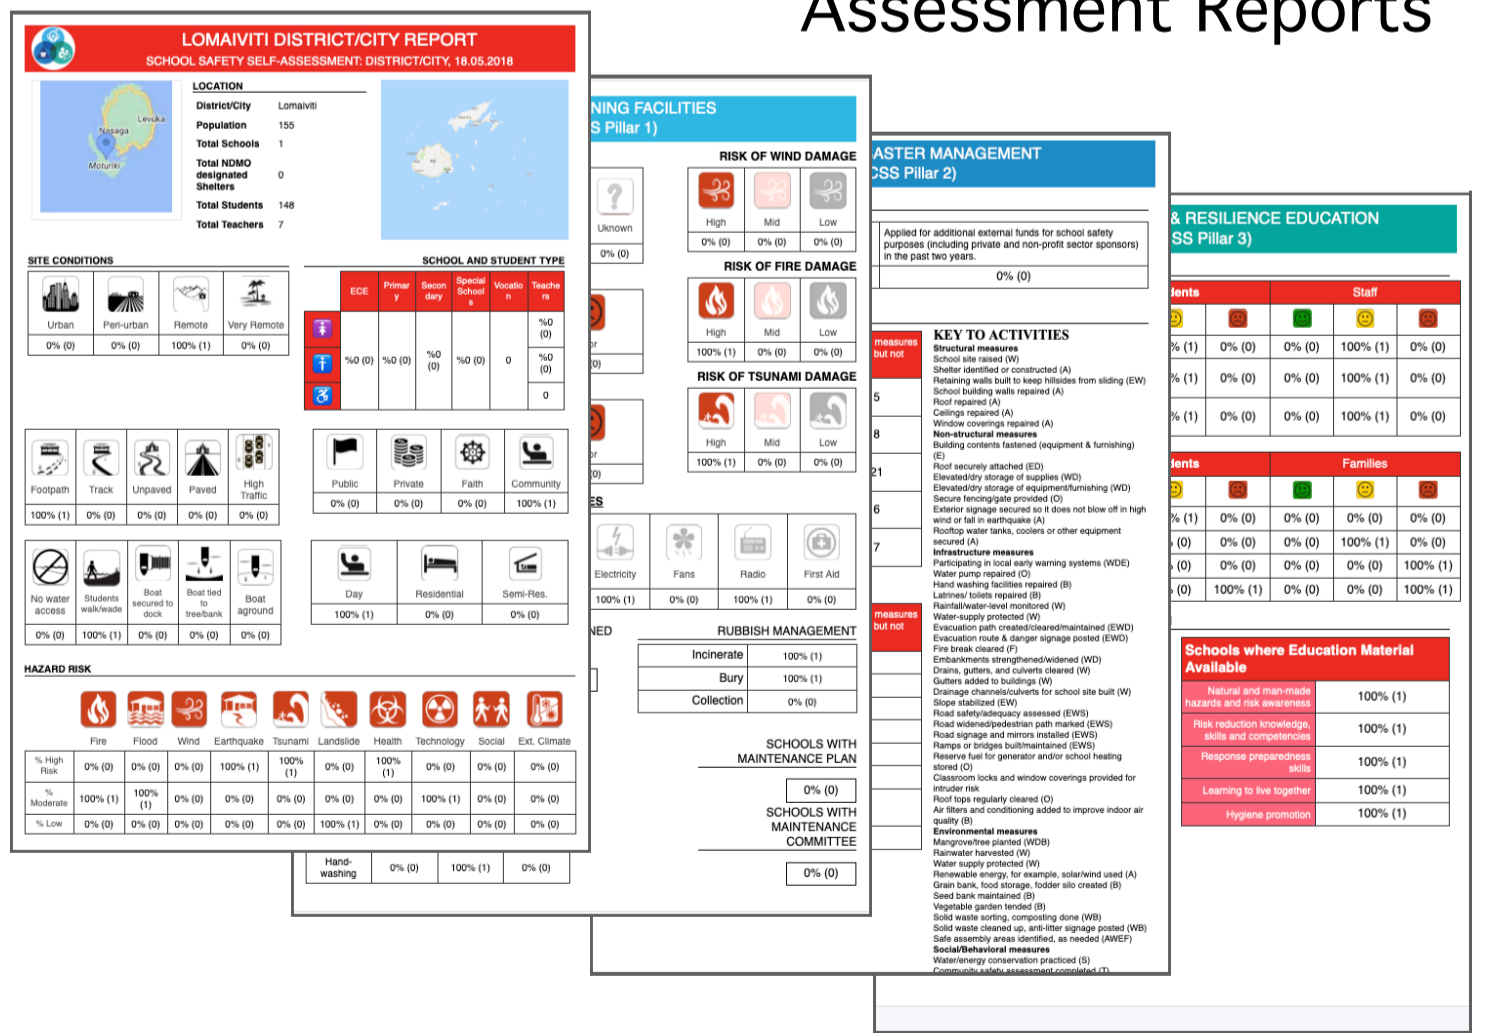

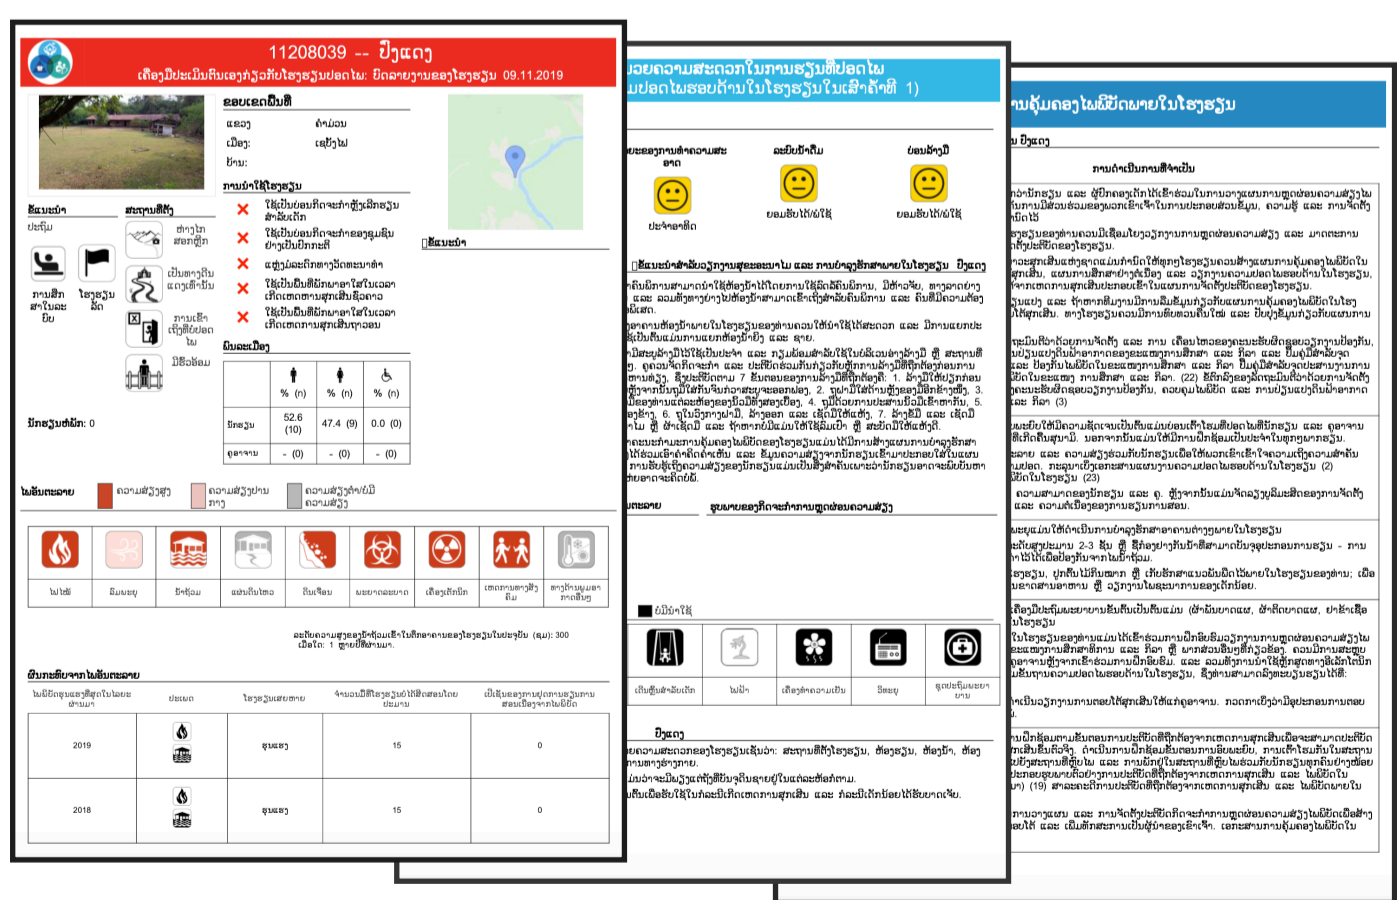

- Information collected is compiled and summarized on the SSSAS Web Portal.
- Users are authorized for different levels of access to information. At lower levels users can download reports and see schools on map. At higher levels, some users may enter data, downloaded data, run ad hoc queries or design custom automated reports.
- Schools receive their automated visual reports with suggested next steps.
- Automated sub-national and national level reports are available via the SSSAS Portal for planning and decision-making. Location and time-stamped photos facilitate remote assessment. Reports and full set of school safety records are downloadable.
- Implemented in Lao PDR, China and Fiji since 2015. Upcoming implementations in Solomon Islands and Tonga.

On iOS and Android

**School Safety Assessment Report**  
 Location, school name and ID, type, uses, enrollment.  
 Hazards, impacts and CSSF Pillar 1, 2 and 3 details.  
 Rating, ranking and recommendations.

**National and Sub-national Level School Safety Assessment Reports**
