

COMPREHENSIVE SCHOOL SAFETY ASSESSMENT SUITE SCHOOL WATCHING APPLICATION (SWAPP)

Mobile digital toolset that aims to raise the awareness and engagement of children and promote child-centered social accountability on school safety.

- Students are organized in school watching teams and they are assigned in specific locations to conduct assessment by taking pictures of hazards/risks. For data privacy purposes, students only use their nicknames.
- Information collected by students using the mobile app will be collected and validated in the desktop app by the school DRRM coordinator before it is submitted to the central repository.
- The app can generate school level and consolidated reports that includes all the hazards identified by children and the specific action points/plans necessary to address this. Reports can be used by schools in their school-based management/planning or share with partners.
- Currently being pilot-tested in 2 Regions in the Philippines and will be soon rolled out on a national scale.
